**Dr. Anabel Ford** | North Hall 1041 | 893-8191 | Dr. Anabel Ford | North Hall 1041 | 893-8191 | [anabel.ford@ucsb.edu](mailto:anabel.ford@ucsb.edu) | [www.marc.ucsb.edu](http://www.marc.ucsb.edu)

Dr. Ford's research focuses on the ancient Maya and the tropical forest of Belize, Guatemala, and Mexico. Archaeological field and laboratory work has concentrated in the upper Belize River area and El Pilar, and has both basic and applied components. Working on the development of complexity and land use change, data have been collected on settlement patterns and household collections. The discovery of a major Maya center, El Pilar, has led to studies of conservation and development of the Maya forest working towards the preservation of the cultural heritage in context of the natural environment. Community and protected area

development play a role in the field projects. Results have impact on the interpretation of sustainable in the tropics today.

Opportunities with this project include:

- Geographic Information Systems (GIS) and LiDAR
- Artifact analysis of ceramics and lithics collected at El Pilar
- Collections descriptions with Access
- Illustration with field data with Photoshop and Illustrator
- Library research on the Maya forest and the ancient Maya
